

Abstract of the Disclosure

5 A hosiery displaying device comprises a main body with a hosiery attachment region defined by a multiplicity of openings in a grid-like array through the main body, each opening being configured to receive therethrough a fastener for securing a hosiery article. A hook-shaped hanger portion extends from one longitudinal side of the main body for hanging the device from a retail display fixture and a U-shaped stabilizing portion extends from the opposite longitudinal side of the main body for supporting engagement with hosiery articles secured thereto.
